

Elizabeth Keith

consider the cost to the taxpaying public who cannot afford the switch. consider the cost to produce these "green" vehicles.

you are deceiving us and you are full of lies and deception as to the effects and benefits. pounds of hazardous materials, millions of gallon of water, mining lithium, cobalt, manganese using slave labor. no plans in place to safely recycle or dispose of these 'green' contaminants and no plan in place to replace batteries affordably.

shame on you all collectively for the domestic terrorism you are perpetrating upon the American public
