

Thomas Arrell

Now, if this comes about, is this state going to do away with farm tractors and ALL aircraft as well? When is the governors car going to be electric or all of the police vehicles and emergency vehicles? The electric grid can not sustain this now as California is already find this out.. Inslee has his head someplace it does not belong. Nuclear power generation is out!! Look at WHOOPS!! Most people already pay more for power than what they did three years ago. Just think what it is going to look like if they have to charge their car or cars and still have to pay for the government gas vehicles and emergency vehicles.
