

Timothy Collins

The rules and laws that are being proposed by the state of Washington upon the citizens and businesses are going to place unreal and excessive costs upon us all. It is an unreal expectation to change our automobiles over to all electric . To place such a law on the aforementioned people of Washington will place an impossible hardship upon all of us. Millions of people will be impacted by this insanity. The desire of elected officials to do away with gas and oil is absolutely disgusting. These officials will single handedly put thousands if not millions of people out of work and force more homelessness on our society. This absolutely cannot happen . EVs are extremely expensive and out of reach and touch for hundreds of thousands of people. People that live on limited income such as Social Security retirement will be priced out of the market. What will be the result of limiting the citizens of Washington to buying expensive EVs that they cannot afford ? What will be the cost of having to build charging stations for all these vehicles ? What will happen when a person cannot charge their vehicle to get to work ? From all the research I've seen or read there will be countless troubles arising from being " told " what type of vehicle they can purchase . It also seems to me that the elected officials are not even considering the 1st amendment which gives all of us the freedom to choose what type of automobile we choose to drive. Please do not pass these insane laws that verge on the infringement of our freedoms of the constitution. We are not California, we are Washington state it seems that our Governor is wanting to go along with Californias Governor to be like them .
