

## Cecily Hoffman

Electronic vehicles are too expensive. They do not accommodate all driver's needs. They will not have the necessary power and sustainability for heavy over the road transportation. The cost of providing the charging stations needed and the actual availability of electricity needed to operate all the vehicles for Washington residents and businesses is unknown. Nor is it likely that the State of WA and its electricity providers will be able to provide the necessary amount of electricity to power the state, homes, businesses and cars.
