

Margaret-Mary Morgan

I understand the need to have less gas powered vehicles however, I am not in favor of 100% ban on gas powered vehicles.

1. As of right now if we wanted to take a long trip in an electric car how often would we have to stop to recharge? and how long would we have to stop for?

2. What if there is a power outage? A big wind storm could knock power out for several days. How would we recharge? Public charging station - that would have a huge line?

I take care of my aging mother - I can not risk not having a vehicle that is not charged.

I feel this is a bill that is being shoved down our throats because it is our governors beliefs to be "green". Again, I am all for trying to be green but at this banning gas powered vehicles is not a good option.
