

Kevin Woodland

We should NOT tie our regulations to California.

We need to build more Hydroelectric Dams and NOT tear any down

We need to build small and reliable Nuclear Power Reactors. Like the ones on US Navy subs & ships, that I serviced while working for PSNS.

Electric vehicle technology is not ready for for EV to be the majoriety of vehicles.

We don't have sufficient electric power to switch to EVs.

The environmental costs of making and servicing EVs is greater than conventional vehicles.

EVs won't work for an emergency evacuation - Please note what just happened to EVs in Florida.

State Leaders should already be aware of the FACTS related to my comments.
