

Barbara Goehner

Please, Please do not make this a law. The proposal has not been planned out thoroughly. Do we have the infrastructure to handle filling up the cars on electricity? Does a police car have the same speed and /or engine to go after people with older gas cars? IS there electric stations in every city and back roads the same as gas stations? What about businesses that have trucks and 18 wheel haulers? What do you do with the batteries after they are worn out in 5 years or less? Where to dump the batteries without leaking acid all around the earth? This is not environmentally sound!!! I have heard that electric cars don't last as long as gas cars. - We have a working 26 year old truck and it is paid for. Please DON'T mandate this transportation to the public when you don't have all the bugs thought out. Oh another thing - even thou we may have a lot of electricity here in Washington state, traveling to other states with limited electricity -would be much harder to do without that much electricity. Can you get a tank of electricity if the car runs low? Gas still is more portable. These are just some of the questions SANE people are thinking!!!
