

# Mark Dittell

- 1)There is NO infrastructure to support this!
- 2)The POWER GRID is not capable of supporting Washington residents @ 5% how will they support 30%. 3)Americans can NOT afford to the cost increase of purchasing electric vehicles at 2X times the cost.
- 4)There is NO replacement battery infrastructure, 10 years is the normal MAX for batteries WHERE do the DEAD batteries go/where is the recycle process.
- 5)Where is the DISPOSAL process of cars which have dead batteries and it cost more to replace batteries than to PURCHASE a new car!
- 6)You can NOT put this on the back of car owners, considering the average income of Washington voters.DO the MATH, or try this ask an AID with real numbers on top of real world numbers for housing and every other cost.
- 7)Is there going to be street charging requirements and parking garages?

This committee has NOT THOUGHT these things out!
