

Rachel Molloy

I'm writing in support of including a more inclusive list of overburdened communities and erring on the side of caution moving forward, as impacts are likely to increase and clarify in future. Any decisions should be founded in scientific and evidence based justification when solidifying the framework, with clear steps, a non-burdensome vetting process that doesn't overload already burdened and struggling communities with the lift, and which takes steps to seek out those communities usually left out and marginalized by previous systems or efforts. Thank you for your time and consideration, and thank you for your work and effort on air quality and climate actions.
