Farren Thorpe

Revise SAS Core Services:
a) Manage annual emissions data submittals to the Washington Emissions Inventory Reporting System (WEIRS) and summarize statewide emissions from Title V point sources across the state.
b) Develop the Comprehensive Emissions Inventory for every 3rd year while coordinating with the EPA National Emissions Inventory (NEI) process, for estimation of all natural and anthropogenic source categories.
k) I don't think NW-AIRQUEST is an MJO... and we currently work more with NRMC than NW-AIRQUEST

Concerning (m) I think it could also use some rewording but I don't quite understand it's intent.
