

# WA Physicians for Social Responsibility

What questions do you have about this rulemaking?

How does Ecology assure input to Rulemaking from Vulnerable Populations and Overburdened Communities?

What concerns do you have about this rulemaking?

1) Concern that benefit to VP and OCs be adequately documented and reported: <br>For example, for transport projects, document specific benefits: projected and actual ridership by VP, # of subsidized fare riders and #/type of trips, <br>2) Concern that carbon inputs/costs of construction of transport projects be documented as well as carbon <br>'saved' or off-set by operation of the project

What hopes do you have for this rulemaking?

That VPs & OCs are actively solicited by DOE to give input, and document actual economic and health benefits of CCA funds

What barriers might make it harder to participate in this rulemaking? What scheduling, accessibility, or other changes might make it easier?

Communication barriers to VP and OC input: economic, technology-challenged, not actively solicited

What else would you like to share?

Thank you all for asking for input, and for doing really important work to save the planet and our health!
