

# Devon Kellogg

Greetings Department of Ecology,

I am a parent and a teacher who cares deeply about the preservation of a livable climate.

In this rulemaking for electricity markets, please make sure rules for the larger markets don't inadvertently discourage local, distributed, renewable and storage systems and/or smart grid/panel technologies.

(<https://www.iea.org/reports/unlocking-the-potential-of-distributed-energy-resources/executive-summary>).

Additionally, please include rules minimizing or penalizing the use of SF6, one of the most powerful GHGs, in electricity distribution systems. (<https://www.bbc.com/news/science-environment-49567197>).

Thank you for your consideration.

Devon Kellogg and Family
