

Brock Milliern

What additional information should be included about spending that is formally supported by a Tribal resolution?

This question should be asked of tribal leaders/governments.

How should Ecology determine which projects are required to report their GHG emissions reductions?

Acquisition and ecosystem restoration should either not be collected, or there should be a tool created that is easy to use for these types of projects.

What should Ecology consider when determining how to evaluate greenhouse gas emissions reductions from projects?

Many projects already collect metrics that measure environmental services/benefits. Allowing agencies to utilize current metrics that could also lend to emission reduction measurements would reduce redundancies and administrative burden.

What else would you like to share?

Requested information on projects should be simple and streamlined--point location and high level description.
