

Roger Schmidt

currently the reason for this contact is to state my ideas to: addressing many of the issues we are facing on this planet. Witch to me should be called!

(The state of the planet and how it affects us and what we must do)

The idea is to contact all the people who study each area of the science of the planet and each field and its life and lack thereof!

By speaking to people in each country in all areas we may find very helpful and less harmful ways of doing things and we will be getting a consensus or not to the cause and effect of things and what to do!

So, with all of the things below we can establish what is or is not the problems and what must be done to cause less harm or no harm.

followed by (what we are going to do to rejuvenate rebuild and learn to live within the means the earth offers without causing harm to the earth's eco systems! by speaking to the health consequences of doing things and how are they being done compared the alternatives.

Then we must speak to the Medical and health problems like cancer and the very long list of health problems! For man nor beast can live in a toxic world, nor can many other kinds of life we humans, are killing off at a very alarming rate.

After doing that each group and each area from around the world compare and contrast their information and look for the best ways to do things. Then put together a collaborative report in their area of expertise.

At which time a documentary, I would suggest of each area! Speaking to the problems and the best ways to try to fix or lessen the problems!

Then have all groups get together to speak to how they can work together on the environmental and climate change solutions as well as the long list of health problems!

By doing a series of education documentary's you can educate the majority of the earth's population to the reality's that we face and what we all need to do to help. By making it a collaborative project! Around the globe and being done from people around the world will lend much more credence to the facts!

- 1) With climate change. What do all fields of science say are the big problems. So, contacting each department or group in the USA and every country and then what can be done to help to reduce or fix each problem?
- 2) With air pollution what are the big problems and what can be done? In all countries!
- 3) Water pollution what are the big problems and what can be done! Ocean pollution like plastic and the thousands of other things that end up there. The over fishing, the dying off of the coral reefs and the hundreds of kinds of life, that live within them. The acidification from burning coal which is also causing great problems. Stating that if other

countries don't do! so why should we is beyond just a poor excuse! We must push for the best we all can do in every aspect! And helping others do the same!

- 4) Agriculture what is helping what is hurting? Like what is the effect of dumping 900 million gallons of pesticides' every year on the crops we eat? What are the effects of the fertilizers? how are they affecting everything around where they are used and far beyond.
- 5) Food we eat: what is best for us and what is best for the planet?
- 6) what kind of dwellings for living?
- 7) Population and over population cause and effect of problems.
- 8) Health both mental and physical from living in this world with all the externalities of this life!
- 9) Species of life on this planet and what they do! What will happen without them?
- 10) Environmental practices what they do and how they help. What happens without them?
- 11) GMO, S what are they doing to everything? Why don't most countries allow them? See the health effects and how this genetic material is even being found in honey!
- 12) The bees and other pollinators. what are the reasons for their die off? Why are we not doing all we can to protect them and save them 40% of our food will be gone without them! Why are we not planting massive amounts of flowers worldwide to feed them!
- 13) The birds why are they disappearing?
- 14) The monarch butterflies why are they dying off? Will just planting milkweed help?
- 15) Should we have a mandatory amount of time from each and every one of us? It was done during war in a way. To me this is a real war that can save so much life and the life we save could be our own!
- 16) Environmental racism! What it is and how it kills in so many ways!
- 17) Then after all off this is done look at what we have from here and around the world. Then talk about it all and what is the best course of action on each and every issues!
- 18) Then a video showing the problems and then one showing how to do the fixies and tell what it will take, and tell how to get it done and how they can help!

19) billions of us will be needed to then do the work needed

20) Things will be added and removed from the list

21) We must replace old technologies with ones that will help not harm. Like bio soaps, plastics, none toxic dyes, and many others. we must stop making thing that can't be recycled and find was to recycle that do not harm!

So, the reasoning behind this is to get all this information in the public eye and more! Get experts in documentaries to work together on all aspects showing in great detail the physical blatant evidence of how and why and what we need to do about it all! Why just distracting ourselves with things that really don't help anyone or anything! Is Killing us all for real! Everything is on the line! Time is not on our side

putting together a comprehensive view of whats going on with and to our planet!
Get the experts in each field from around the world to get together to speak to and about whats know to be the facts related to what they see happening, then what they see to be the way to fix or slow or repair the damages. Then speak to the alternatives with all things in their fields.

The lack of understanding of the issues going on with our environment and the planet is due to the lack of educating the people of them and how very import it is to. Know of them and how we must act accordingly so we can stop the damage the harm and the deaths of not just us but all living things. Which is due to our miss guided acts!!

So that is why we must educate the mass! since the majority of people spend. hours every day watching TV! So, it only makes since that it is used as an educational tool! We must help we must do what is needed. To be practical and so we can all act more prudently .so we can save lives and life as we know it on the planet!

Next is networking plan that I call!

THE SPIDER

the idea I have is to put together contact points for what I call the spiders web! The idea being to have contacts points in the world linked in to a main hub or control center. A place where the information and the actions can be responded too!

Like here in the USA we have many groups that are working on a large verity of issues in every state. So, they could all become part of the spider's web. Witch would be beneficial to both the groups and the spider! Their group would then be linked to a place where hopefully many other groups would have their information as well.

This would make it easier to find them and if all were inclined to have theirs in one place!

The spider could be the hub that could then see what groups do and where! Witch would be helpful to see where the problems are and if they are being fixed! also information could then flow on what needs to be done and how to fix the issues!

This could be done worldwide! Being a guy who has seen a lot of documentaries! I know a lack of sharing information is and has caused a lot of problems and even many deaths!
So. Have a list of documentaries old and new should be on the Spider! Have them subtitled in a variety of languages so all can understand them!

Many will be needed to make this function and a method to pick the people who are a part of the web? Experts in a number of areas who can look at and speak to each area. then have collaborations of all the ideas as to pick the best course of action at that time!
Then of course will be the cost to run such a large-scale project. Part of the Spider site would be to sell green products. Witch there are many! And this would open a world-wide flow of this! A cost per sale or to have their products on the site or something like that.
Much of it could be done by volunteers
