Monitoring equipment and sensors are listed as ineligible expenses. However most areas do not have monitors. Where I live the monitors are upwind of me, and cannot capture my situation, which is in a neighborhood with bad traffic.

What sorts of equipment do you envision allowing? Purple Air monitors could be a wonderful addition to any outreach or education program to give the public ownership and better understanding.

The most important thing you could do to address air quality in the Tri-Cities and Wallula is to partner with the growers and packing houses for electric semi trucks, 'shore power' while waiting for delivery or pickup at refrigeration facilities, and getting Hanford commuters out of single occupancy vehicles.
