

Gabriel Kennedy-Gibbens

Ecology must deny the permit for Sabey's proposed diesel generators in Quincy. Diesel generators create more air pollution, which will negatively affect the local community of Quincy, which is already experiencing and adjusting to unprecedented growth and pressures from data centers. These generators will also contribute to worsening the climate crisis. We must not set a precedent of adding more fossil fuel infrastructure to meet our growing need for electricity. This need must be met with clean, cheap wind and solar projects!
