

Agatha Nolan

Please reject VoltaGrids permit to construct 14 Natural Gas Generators in Quincy, WA to power AI data centers. Our land, water, and energy resources are finite - and we have to stop wasting them on AI speculation. The construction of these power systems alone will bring 56 Diesel Trucks through Quincy each day, generating toxic air pollution, and 187 tons of CO2 emissions. Please stop the construction of the power grids to support more data centers - we don't need it / let's push back on the big Tech firms and keep our Washington state lands beautiful and ecosystems safe. It's starts with needing to generate more power, but next they need more water, and the state will need to safely process more waste water produced by these mega data centers. Aren't there enough Data Centers in Quincy?

At the very least, please hold a public hearing if you are unable to deny the permit outright.
