

E. O'Halloran

Please do NOT approve this manmade disaster for our state. At a time when accelerating global warming is causing our state record drought and subsequent record fires, we must reduce carbon in the atmosphere, not add tons and tons more. The emissions from this plan will also add hundreds of asthma attacks to community members, some of whom will be hospitalized and some of whom will die. Diesel generators are a scourge and should not be approved. If they need generators, they can use solar power with battery backup instead. The loss of your children's future is on your hands if you approve this. The public does NOT want this.
