

Jacob Gregg

I am an Electrician who has been building data centers for many years now, on both sides of the mountains. I moved to Rock Island in 2019 for the work, and am glad to be a part of the local communities.

These data centers provide hundreds of jobs during construction and long lasting/continual jobs for upgrades and maintenance. These data centers also provide jobs for their own employees, and additional jobs for security, maintenance, cleaning, delivery services, landscaping etc.

Most of us electricians who build these data centers make approximately \$100K-200K a year and spend this money locally on clothing (Stan's and Coastal), hardware/tool stores, and many restaurants, bars in the Wenatchee Valley area.

If these data centers are not built here, they will be built somewhere else in the State, or unfortunately out of State, and at worst, outside the USA. I would much prefer to keep the jobs, money, community building and growth to stay in our area, and not be shipped out somewhere else.

These data centers are quiet, clean, and hugely beneficial to our local community and the highest growth industry in the area for almost the past 2 decades. Please keep this community growing and continuing to prosper with all the financial gains we have to look forward to in the future!

Thank you.

Sincerely,

Jacob Gregg
