

Anne Stoltz

Please do NOT approve the Sabey Data Center E, West Wenatchee, air permit, documentaton and notices. There is no safe level of emission increases from this project. And with rapidly declining demand for AI services there is no compelling business justification other than corporate greed and to conduct business as usual. It is time to stop the cycle of social malfeasance and environmental destruction that is central to Sabey's operations. Please prioritize the health of our environment and the humans and other organisms that rely on clean air. Washington State should be the priority, not corporate profits.
