

Karen Dunning-Wells

To Department of Ecology of the State of Washington:

Because of the troubling amount of pollution that is emitted by data centers into the environment, I believe the Sabey Data Center should be dramatically decreased in size and in numbers of generators, rather than expanding it. I propose that you do more research and search for other solutions that would diminish the damage to the environment and the harm to individuals living there.

—Karen Dunning-Wells, resident of Wenatchee
