Dear WA Department of Ecology,

Thank you for your work to protect communities and the environment from toxic PFAS chemicals through many different mechanisms, including the PFAS Chemical Action Plan, Safer Products for WA implementation, and now the PFAS Food Packaging Alternatives Assessments.

As a person of faith, it is important to me that we do all we can to protect communities from toxic contamination and its negative health effects, as well as tread lightly on our sacred earth.

Time is of the essence. A recent study by Toxic Free Future showed PFAS in the breast milk of all women tested. Not only does PFAS pose health risks for consumers, it is also a serious environmental justice concern for the communities in which these chemicals are manufactured. Safe and suitable alternatives for PFAS in food packaging are available and are being used in this state.

The vote for the ban was approved in 2018. We need to get this thing rolling faster than it is, and to eliminate it in all packaging.

With the upcoming second alternatives assessment for PFAS in food packaging, time is of the essence. It has already been three years since we passed the PFAS food packaging legislation in 2018. While we wait for this bill to be implemented, retailers across the country continue to voluntarily stop using food packaging with PFAS, demonstrating that alternatives are widely available. Additionally, cities like Seattle that require entirely compostable food packaging, which does not contain PFAS, also confirm that these products exist and are widely used.

Please consider the abundant options and widespread circulation of various PFAS-free food packaging being used in Seattle and voluntarily by many retailers elsewhere as evidence that there are suitable and safe alternatives available.

I also ask that you accelerate the timeline for the alternatives assessment process because of serious environmental justice concerns. The Daikin America plant in Decatur, Alabama, where PFAS for food packaging is produced, has a legacy of significant PFAS contamination of land and drinking water. People of color comprise 78% of the exposed community living within three miles of the plant. We have a moral responsibility to protect communities both in Washington and where PFAS is produced outside of the state. Removing PFAS from all food packaging as soon as possible is imperative for the health of communities everywhere.

I appreciate that Washington is a leader in toxic chemical reform. Please continue to set a high standard with swifter implementation of the second PFAS Food Packaging Alternatives Assessment.

Sincerely,  
Pastor Charis Weathers
