Subject: Comments on Draft Per- and Polyfluoroalkyl Substances Chemical Action Plan

THIS EMAIL ORIGINATED FROM OUTSIDE THE WASHINGTON STATE EMAIL SYSTEM - Take caution not to open attachments or links unless you know the sender AND were expecting the attachment or the link

Dear Irina Makarow,

Thank you for developing PFAS Chemical Action Plan (CAP). CAP is the blueprint we need to address contamination and prevent new PFAS pollution in our state. It represents significant opportunity for Washington to demonstrate leadership and create a model for other states and the nation, as Washington has done on challenging toxic pollution issues for more than a decade.

I applaud the state for many actions in the plan, however, I believe CAP falls short in its recommendations, particularly when it comes to using existing regulatory authority, setting timelines and aggressively investing in solutions. CAP must be strengthened to protect health of communities and environment.

In particular, CAP should include these recommendations:

- Ban non-essential uses of PFAS beginning in 2025. CAP identifies carpet, residential upholstery, apparel, cleaning agents, floor waxes and stone/wood sealants, and waterproofing agents/aftermarket treatments as significant sources of PFAS in the home. Currently, recommendation delays action on many non-essential products despite significant evidence that they are important sources of exposure. We must act swiftly to reduce impacts of PFAS now.
- Immediately designate PFAS as hazardous substances under Model Toxics Control Act and adopt cleanup standards for all PFAS in 2021. Neither state nor federal law recognizes PFAS as hazardous substances despite significant drinking water contamination and known health effects of PFAS. This is critical to ensure polluters pay to clean up contamination and drinking water in communities.
- Pursue immediate testing of sludge and develop sludge (biosolids) standard for all PFAS. Sewage sludge (biosolids) should be tested for PFAS chemicals, beginning with sludge applied to dairy and other farms in our state. Alternative disposal methods should be investigated to keep PFAS off farms and other lands. This action is vital to prevent continual recontamination of our food and bodies with PFAS.
- Adopt strong drinking water standards in 2021 for all PFAS. Department of Health is currently establishing standards for PFAS in drinking water, which are set to be finalized in 2021. Setting standards for all PFAS is the only way to ensure that Washingtonians have access to safe drinking water.

I ask that you take bold action to ban, regulate, and cleanup PFAS contamination in our state. These dangerous and forever chemicals don't belong in homes or drinking water.

Regards,
Den Wichar
