

Heidi Stephens

Per your report, PFAS are dangerous to plants and animals/humans, and yet it's hard to identify the sources of contamination or recoup for damage reimbursement and mitigation. So, no amount of "cost" to corporations should matter and PFAS should not simply be reduced but BANNED from all future products manufactured and currently in use, IMMEDIATELY. Seriously, why are we being delicate and hesitant about this POISON? I appreciate the 475 page report made available to the public, but it simply justifies this one sentence summary: BAN PFAS IN ALL FUTURE PRODUCTS AND CURRENT USES NOW, AND GOD HELP US AND THE FUTURE GENERATIONS LEFT TO DEAL WITH ANY OF THIS REMAINING RESIDUAL TOXIC POLLUTION... BUT AT LEAST ITS PRODUCTION/USE ENDS NOW!
