DES

1. Reporting-What does this mean to master contracts and state agencies? Could this look like marking a green leaf in vendor catalogs? Would reporting include a way to easily identify greener and safer alternatives and to note which products to avoid because of restrictions or bans?
2. Is an example of reporting submitting a static link to third party certification websites for that specific product vs saying a product is green and safer?
3. Pull in SEEP group early and often for reporting and potential restrictions so state agencies can model upcoming changes and model the way.
4. Can reporting include submitting verification of green certifications to DES for purposes of managing master contracts? One challenge DES staff are experiencing is how to verify 'green' claims of products.
