

DES

Is there an opportunity to do a pilot test/project with DES on products being purchased through Master Contracts? We could take your list of products and see what state agencies are purchasing said products...and test alternatives as well for your identified criteria.

Will there be a list of preferred products vs restricted products?

Will there be a working list of EPP products?

We support testing of wastewater treatment plants of their influent and effluent.

Please further investigate cleaning products. At DES we are working on green janitorial products and could use your information to make better informed decisions on what to allow to be purchased on Master Contracts and what products to restrict.
