

Michael Clark

I am in favor of a complete and immediate ban. PFAS chemicals have been known for years to be problematic. Manufacturers have ignored this at their own peril as well as ours. There are alternatives available and even if not, it's far better to remove these PFAS chemicals from our environment than leave them in. I just don't believe manufacturers who claim otherwise as they always chose the least expensive formulations and are loathe to change formulations with an always specious claim of cost. At the very least, **require** labeling that states if PFAS chemicals are in the item. Be it **any** item. Then people can chose. If this ban is accompanied with an education campaign, those items with PFAS's will be shunned.
