

Elisia Dalluge

Yes. I love it. Thank you. It is and has been hurting/poisoning and killing us, animals and our ecosystem. Safety 1st. We must put a stop to it.

Why isn't make-up and other body products listed? Our skin is the largest organ in our body and absorbs things into our body.

Also, in holistic care, what have other states banned and regulated and what's the comparison? CA is a great state to reference via parallel PFAS regulatory care. Where is that cross sectional comparison preliminary report for review to ensure we don't let anything fall through the cracks?

Thanks real friends,
