

Lorna Moffat

Thankyou for considering this most important issue. These chemicals are in us all, stored in our fat tissues and accumulating and none of the corporations responsible for these chemicals are held responsible for the health issues that come from them.I ask that you consider restricting, indeed, preventing sewage companies from being able to put their waste products on farming soils because farmers are not told of all the hazardous waste we are generating such as Forever chemicals.

These chemicals stay in the soil forever and the plants uptake these chemicals and then we eat them either through the meat we consume or the vegetable matter.

There is so much pollution we excrete from our body and our waste water. I ask that you educate,in adds on the radio, where these chemicals are hidden and how to avoid them. We must forbid companies from using these products.
