

Karin Engstrom

Dear To Whom It May Concern,

Thank you for providing an opportunity to comment on the Holistic Settlement Agreement. Please update the Consent Decree Changes and New/Changed TPA Milestones to reflect the following comments:

1. WAIT FOR GROUT TEST RESULTS BEFORE ANY GROUT DECISION, DELAY NEW INTERIM MILESTONE M-062-64: Change the date for this milestone from Dec 2024 to *Within 12 months of receiving all relevant information from the 2,000 gallon Test Bed Initiative, including; the time it takes to find a grout recipe that works and hardens tailored to this specific tank waste, grout-to-waste ratios, grout setting time, performance of in-tank pretreatment system, transportation reports, cost reports, and vendor quality of work from both commercial treatment and disposal sites in Texas and Utah. (P.S.- Please require a public comment period on your proposed grout decision prior to finalizing.)

2. PROVIDE ENVIRONMENTAL IMPACT ANALYSES FOR PUBLIC REVIEW PRIOR TO FINALIZING HOLISTIC SETTLEMENT AGREEMENT CHANGES: The agencies need to provide all analyses of environmental impact through NEPA and SEPA documentation and provide this information to the public for review, PRIOR to finalizing changes to the Holistic Settlement Agreement.

3. ASSESS GROUT SHIPMENT TRANSPORTATION IMPACTS: Create and share a transparent plan to assess the transportation impacts and options for potentially shipping millions of gallons of tank waste through communities as part of your proposed grout plan. Consult with communities along potential routes and get public input before making your decision.

4. BUILD NEW TANK SPACE FASTER AND BUILD MORE THAN 1M GALLONS: Move up the date in Milestone M-045-139 to have new tank storage and staging space sooner than 2040. Sixteen years is too long to wait for new tank space, build it faster and increase the volume beyond the one million gallons in the proposed agreement.

5. SHARE COST IMPLICATIONS: Be transparent about the budget implications of your proposed changes to Hanford tank waste work scope and deadlines. Please provide this information as a part of the public comment period.

6. Include the Tribal governments in all decision making by recognizing and making them a full member of the Tri-Party Agreement. This would include them in all the decision making processes.

7. It is obvious that any removal from the tanks may release radioactive waste into the air, soil and water. What are the ways that this will be monitored in order to protect the communities that are "down wind"? What kind of precautions for the workers who deal with the waste?

Please hold further public hearings to include the people of Spokane and Portland. As someone who no longer drives - I would appreciate a meeting in Seattle that was bus friendly. What is being

proposed is big. We need to move forward to stop the leaking tanks affecting the ground water and river - but the whole Hanford project cannot be siloed.

Thank you for considering my comment.

Sincerely,
Karin Engstrom
