

## Jim Byrne

I am a long time WA resident. We need NEPA and SEPA in this decision. We need an EIS as well to protect the Columbia River from toxic groundwater. Fix the leaking tanks now! We also need a plan B. Changing the waste into "safe" glass logs doesn't begin until 2033. What is the contingency plan until then? What if it doesn't work? Nuclear half life is very long. I want to be sure my kids and grandkids will be safe. Thank you.
