The closure plans for the 216-B-10 Pond and the 216-S-10 Pond include section "H.6 Schedule for Closure." Both closure plans defer closure to the CERCLA remedial action for the 200-OA-1 OU. There's no efficiency in deferring closure because the closure actions are relatively simple. The closures should be scheduled independently of the 200-OA-1 OU remedial action. Early closure would reduce administrative overhead on Ecology, USDOE and US EPA.
