Heart of America Northwest (Gerry Pollet)

Thank you OK. Continuing for Gerry Pollet for Heart of America Northwest. On the Central Waste Complex thank you for answering questions this evening. We have a long record of correspondence with Ecology and EPA and USDOE demanding that there be an enforceable permit condition to remove all inappropriately stored wastes from the Central Waste Complex on a firm enforceable timeline. We've been asking for this for years. There are thousands of drums that are include incompatible wastes waste that have not been properly checked to see that they have no liquids which are illegal to store. There isn't proper secondary containment for potential liquid wastes. There may be, there are, we know there are corrosive wastes being stored for extended periods of time. We've seen the photographs of inspections of the effects of those corrosive wastes eating through containers. This permit needs to have an enforceable condition to remove all the backlog that is stored beyond the legal limit and that backlog should be removed within 3 years really should be one year. And but again as with just discussed on SEPA and tanks there is no environmental impact analysis of the mitigation needed and reasonable alternatives and there isn't really a plan for us to review. It's again work plans to be submitted and we can't review and comment whether or not the best treatment with the best results for disposal and worker safety will be chosen without firm commitments or an EIS. Thank you.
