

Cal Q. Later

Why did Ecology provide outdated files for the permit? Attachment 4, Hanford Emergency Management Plan (HEMP), provided for public comment is Revision 8 (see the upper right corner of the document); while attachment 4 of Rev. 8C of the Hanford Site Permit is labeled revision 9. One assumes that the latest revision of a document is the most up to date and therefore the most accurate and the document that we the public should be commenting on. If one of the provided documents is outdated how many other documents are also outdated?

Ecology should ensure that the public has access to the latest documents and then provide sufficient time for the public to comment.
