Lunell Haught

My concern is that much has changed in the 15 years since the last EIS was done, and the new permit does not recognize or address any changes. Specifically, the new EIS should include analysis and comment on
Preventing USDOE from trucking liquid radioactive hazardous waste through Oregon or Spokane.
Requiring leaking High Level Nuclear Waste tanks to be emptied within a year of being identified. As I understand it three are leaking now.
Preventing disposal into contiguous border areas
Specifically addressing the ongoing issue of cleaning up Building 324 and surrounding soil.
Requiring an EIS for the continued storage of wastes at the Hanford Central Waste Complex built by USDOE.
Requiring investigation and treatment of the unlined ditched in central Hanford and a treatment schedule.
Thank you
