On June 29th 2026 a 120 day public comment period opened. Don't try to rewrite history. Extension requests were rudely ignored and when extensions were finally granted, it was too late for an appropriate comment period. Perhaps if Ecology planned out its work like others plan out comment responses, it wouldn't have taken 14 years to issue a draft permit that is 75% outdated. The public comment period should be stopped and the permit should be made current and correct. This permit has no legal possibility of ever being made into a final operating permit for the Facility. To ask the public to comment on something this outdated is incomprehensible.
