

Sierra Club

This is Stephanie (last name inaudible) and I am a campaign rep. with the Sierra Club as well as being a Co-lead for Power Past Fracked Gas, and I just, first of all want to thank you very much again for providing this time for input and what have you. And my comment today is related to analysis on displacement of greenhouse gases and how that will be included in here, especially in export projects, which, you know, we know can be problematic and that there would be no guarantees of greenhouse gas reductions based on promises by, foreign entities to follow through on these reductions, so, you know, I know this is not a question and answer, so moving forward I would, I would like to see some more clarity on that. Thank you very much.
