

Sierra Club

Super, thank you. Yeah, this is Stephanie Hillman and I'm with the Sierra Club and also co-lead of the Power Past Fracked Gas coalition. Thank you very much for this opportunity to make a comment. You know, our coalition is dealing with a couple of projects right now that have SEISs that have very flawed science, so I'm glad that we're going through a process that might, you know, help correct that in the future. So, first of all, I want to kind of endorse all the comments that Amanda has made earlier but also backup what Rebecca has just said--I fully agree that, you know, the scope of this analysis should include direct and indirect emissions to really get the true impact, climate impact of emissions as a whole, because indirect emissions are just as terrible. So, I appreciate it if the scope has included...is inclusive of both of those. So, thank you again.
