

Margaret Johnson

Dear Rulemaking Lead Fran Sant,

We've learned A LOT over the years about how dramatically our use of fossil fuels have damaged our lungs, our communities, our Earth. While at the same time, we have made LEAPS and BOUNDS progress on the efficacy of renewables. We've had the opportunity to evaluate different rules that will steward ourselves to a sustainable planet - a planet that our uber rich - after polluting - climb out of their \$\$\$ bunkers into their \$\$\$ space ships and trundle off to Mars....not giving a damn that their activities - and the government that allowed them to pursue the most offending - an unlivable, lethal trash can of a planet.

PLEASE put in place rules that are based on Science. Force an economy to one in which we can have a sustainable life. One that loves our neighbors (including other animals besides people)(over business interests. AND enforce these rules.

I know you care as much as I do. I thank you for that.
