

Rick Berkholtz

Purpose of rule

And so, I just want to make sure that that is something that will be considered in this rulemaking process and will hopefully have an impact on protecting Washington State, protecting frontline communities, communities of color, communities of indigenous tribes so that they do not get impacted by future proposed LNP projects that have those high emissions. Thank you for hosting this. That's all I wanted to say.

Emissions - Indirect

Okay, hi, my name is Rick Berkholtz and I am a volunteer with several environmental and social justice organizations, including Sierra Club. I just want to be sure that in this rule making process, that methane emissions are going to be tied to LNP projects, or proposed LNP projects because of the, the correlations between fracked gas and methane emissions.
