

Brandon H

So I guess a question, you guys referenced the Governor's Executive Order, which we're all familiar with. But the legislature also weighed in on this with the budget proviso that they've provided in this last biennium. And they made it clear that they want for you to carefully consider the potential for overlap and one of the previous speakers talked about that I think a little bit and got to that point. We're talking about double counting, but also talking about the biofuels and the treatment of those in the rule. And so I guess I'd like for any of you to speak to, how are you in the writing of the rule going to consider any other greenhouse gas emission rules or laws that are already in place? And maybe you can identify those for us so that we know how you're going to treat those, so that you don't have overlapping rules or regulations.
