

## Evergreen Carbon

Okay. Hi, this is Wolf from Evergreen Carbon. I am not noticing methane in table C1 of the CFR. 40 CFR--I guess that's the EPA list. So, methane should be included, as well as HFCs and BFCs. And sulfur hexafluoride, these are all greenhouse gasses. Also the emissions from processes that we might see, like something from...(SF6 of HFCs?) or greenhouse gases may not necessarily be considered an input or output. So I would like to see some clarity around that. And use, like, scope 1 or scope 2. This is what the industry uses, so we can all be clear because those terms are well understood. I think that's it on my comments.
