

## The Nature Conservancy

The Nature Conservancy is just completing modeling for deep carbonization -- west-wide -- of the electric sector. The modeling was completed by Evolved Energy Research, who was contracted for the State Energy Strategy modeling. Specifically, this new modeling also included 3 levels of permitting/siting constraints, and some preliminary site-selection identification. As this work group dives into work in December and early 2022, we would be grateful for the opportunity to share and/or present this project to the full work group, agencies, or individual members of the work group.
