Jenna Kay

Attached for your consideration please find comments from staff in the Clark County Community Planning and Community Development departments.

WAC Section	Comments	From
173-26-020	We noticed the definition for adaptive capacity added to the definitions is not the same definition of adaptive capacity	Clark County
	used in the Department of Commerce Climate Element Intermediate Guidance or draft rules. We would recommend,	Community
	as much as possible, for statewide definitions to be consistent across materials and recommend coordination with	Planning and
	Commerce and other departments also working on HB1181-related rulemaking and technical support documents.	Community
		Development
173-26-020	We noticed the definitions for environmental justice and vulnerable populations has slightly different wording that in	Clark County
	HB1181 and the draft rules for the GMA related to HB1181. Recommend all state agencies doing HB1181 rulemaking	Community
	collaborate and align on definitions as much as possible.	Planning and
		Community
		Development
173-26-191(2)(b);	The new language requiring critical areas be within the master program rather than through incorporation by reference	Clark County
173-26-226(1)	will result in a substantial amount of work needed by our jurisdiction (and likely others) who currently use the	Community
	incorporation by reference approach for critical areas ordinances. If this moves forward, it would only seem fair if a	Planning and
	substantial amount of funding is made available for local jurisdictions to completely revamp this significant portion of	Community
	their SMPs. For our jurisdiction this would lead to needed changes not only in the SMP regulations but also the	Development
	county's critical areas ordinances, to split them apart and remove cross-referencing. It also means, all local	
	jurisdictions will need to manage two sets of critical areas codes, which in some ways could simplify things, but in	
	other ways could create duplicate work.	
173-26-	Regarding degraded shoreline buffers language: From a local jurisdiction perspective, this is legally problematic to	Clark County
226(2)(d)(ii)	implement, particularity without clear objective standards to determine how much to enhance or expand.	Community
		Planning and
		Community
		Development
173-26-	If this is going to be based on Site Potential Tree Height (SPTH), the SMA needs to be extended to the SPTH when its	Clark County
226(2)(e)(ii)(D)	greater than 200 ft. If local jurisdictions have adopted a riparian habitat designation (RMZ) based on SPTH, that	Community
	should be the basis of any expansion the SMA if supported by the local WDFW regional habitat program. As an	Planning and
	example, Clark County has aggregated SPTH by "site class" as defined in WAC 222 and has established RMZs at 205'	Community
	for Site Class III and 235' for Site Class II soils.	Development

173-26- 226(3)(g)(iv) and (v)	Is this intended to be an outright prohibition overriding permit pathways otherwise provided for in Critical Areas regulations?	Clark County Community Planning and Community Development
173-26-226(3)(q)(i) and (ii)	This is potentially creating new inconsistencies with Critical Areas regulations and Shoreline. Also, prohibitions are not "bulk" or "dimensional" standards and are not eligible for a variance, which leaves no administrative remedy for constitutional takings.	Clark County Community Planning and Community Development
173-26- 226(3)(r)(iv)	Same comment as on retaining walls, same applies: This is potentially creating new inconsistencies with Critical Areas regulations and Shoreline. Also, prohibitions are not "bulk" or "dimensional" standards and are not eligible for a variance, which leaves no administrative remedy for constitutional takings.	Clark County Community Planning and Community Development
173-26- 226(3)(r)(vii)	Is management of non-noxious invasive vegetation necessarily Shoreline development? What about use of hand operated tools to clear english ivy and himalayan blackberry? Also application of herbicides?	Clark County Community Planning and Community Development
173-27-030	Normal appurtenance definition: What about garages? Please address specifics related to attached, detached, and any size limitations.	Clark County Community Planning and Community Development

173-27-030	Significant vegetation removal: same comment regarding when clearing is not shoreline development is	Clark County
	management of non-noxious invasive vegetation necessarily Shoreline development? What about use of hand	Community
	operated tools to clear english ivy and himalayan blackberry? Also application of herbicides?	Planning and
		Community
		Development
173-27-035(4)	Does this and related changes mean that such developments do not require a Statement of Exemption?	Clark County
		Community
		Planning and
		Community
		Development
173-27-040(2)(f)(iv)	Regarding the use of "garage" in this section. We have the same comment as on "normal appurtenance" definition,	Clark County
	please address garages-attached, detached, and any size limitations to garages.	Community
		Planning and
		Community
		Development
ormerly 173-24-	Loss of this exemption will require restoration projects supported by our WDFW regional habitat program to obtain an	Clark County
040(2)(p). On PDF	shoreline substantial development permit where the local government review may not substantively alter the project.	Community
pages 22-23	Under the exemption we have been able to adequately assure compliance with the applicable Critical Area standards.	Planning and
	In-water work still trigger's SEPA which ensures adequate notification to the public and agencies that my have	Community
	overlapping jurisdiction.	Development
173-27-100(2)(d)	Does this completely prohibit changes to vegetation and critical areas impacts or just ensure that any such revisions	Clark County
	meet all of the SMP mitigation requirements?	Community
		Planning and
		Community
		Development

173-27-170(2)(d)	Re: no net loss of shoreline ecological function: This criteria is problematic for residential properties that cannot avoid	Clark County
	critical area or vegetation impacts and do not have adequate opportunity to provide compensatory mitigation on site	Community
	to meet no net loss. There may also be cases where the mitigation cost becomes a rough proportionality concern or	Planning and
	violates reasonable investment backed expectations (e.g. for mitigation bank credit purchase). This becomes	Community
	particularly challenging when coupled with the concept that degraded buffers need to be expanded or enhanced.	Development
