

## Nick Maxwell

Transmission capacity can be doubled or more by upgrading lines and adding technologies that monitor line temperature. This should be done immediately, without any effort to get permitting for new lines. As new lines are needed, they should be co-located with railway lines without more than slight compensation to railway line owners. This is for their grandchildren too.

Agrivoltaics should be considered for barren lands the way that China is reclaiming the Gobi desert back into lush and fertile land.

Kenmore has no city permitting requirements for solar installations. They act as if a solar installation is a contract between the utility and the homeowner and additional supervision is not needed. Depending on Kenmore's experience, this should be required of every local government.
