Alison Dennison

In response to: 3.2.3 Differentiate between shoreline modifications to address erosion versus flooding and establish new requirements for stabilization, emphasizing nature-based solutions.
A simple data review, geotechnical reconnaissance with hand explorations (up to 3 hours onsite), and preparation of a geotechnical & geocoastal report is a minimum cost of $8,000 for a property within an hour of any of our multiple offices. The suggested cost of $2,895 doesn't even cover the cost of the data review, reconnaissance, and conversation about possible solutions. The base rate is fine for a mid-level staff but the experience and expertise about codes and ecological benefits of a project come from a higher level staff member.
