Rosalyn Vick

To the Department of Ecology, Clean Energy Coordination:

My name is Rosalyn Vick and I live at 7030 Allman Ave SE, Snoqualmie WA 98065, United States. I am writing to submit a scoping comment on the Programmatic Environmental Impact Statement for stand-alone, utility-scale, lithium-ion battery energy storage system facilities in Washington (Publication 26-06-017).

I am commenting because a stand-alone BESS facility is proposed near where I live, and Ecology has said that project-level reviews will tier to this PEIS. Ecology has asked for input on questions for the study. My comment addresses the following:

Q2 · Geographic scope — Where the study assumes batteries will go.
Theres plenty of options available that are not near schools, residential dwellings, daycare. This has a major risk to immediate community. I ask that the PEIS's geographic-scope assumptions explicitly account for proximity to homes, schools, and hospitals; wildland-urban interface and wildfire-prone areas; seismic hazard zones and floodplains; areas dependent on private wells; and communities with limited evacuation routes — and that proximity to existing infrastructure not be treated as a proxy for suitability.

Q3 · Impacts to analyze — The harms the study has to look at.
I want the study to take into serious consideration real examples of other sites and harm done. The impact on the surrounding community with long lasting effects I ask that the PEIS analyze, for stand-alone facilities: thermal-runaway fires and hazardous-gas emissions (including hydrogen fluoride) with dispersion modeling for inversion-prone valleys; contaminated fire-suppression water and its path to groundwater, private wells, and fish-bearing streams; multi-day incident demands on local fire, HazMat, hospital, and evacuation capacity; continuous nighttime noise from cooling and inverters at distances beyond 1,000 feet; and seismic performance of container-based installations in mapped fault zones.

This is personal for my household. I live near a site where a stand-alone BESS facility is proposed, the Snoqualmie BESS project. My children attend school near a proposed stand-alone BESS site. My household depends on I-90, sr-18, which is also an emergency route for everyone along it.

Because Ecology itself says stand-alone facilities "could be sited in a variety of locations," including near cities, the PEIS should not assume facilities will be far from people. I ask that Ecology treat proximity to residents as a defining condition of the analysis, and that the Draft PEIS state plainly which impacts cannot be mitigated below significance, so that lead agencies and the public are not left to guess.

Thank you for considering this comment. Please include it in the scoping record. Our community is following this PEIS closely and intends to participate in the Draft PEIS comment period.

Sincerely,
Rosalyn Vick
