Alex Wunderlich

To the Department of Ecology, Clean Energy Coordination:

My name is Alex Wunderlich and I live at 39735 SE Walnut Street, Snoqualmie, WA 98065. I am writing to submit a scoping comment on the Programmatic Environmental Impact Statement for stand-alone, utility-scale, lithium-ion battery energy storage system facilities in Washington (Publication 26-06-017).

I am commenting because a stand-alone BESS facility is proposed near where I live, and Ecology has said that project-level reviews will tier to this PEIS. Ecology has asked for input on questions for the study. My comment addresses the following:

Q2 · Geographic scope — Where the study assumes batteries will go.
The Ecology study should define "suitable" areas by what is safe for the people who live there, not just by where a facility could physically be built. We must consider the potential impact to nearby communities, including dangers to humans and the ecosystem. These facilities are a disaster waiting to happen, and they should not be forced on communities (often against their will) without thorough research, risk mitigation, and consideration of alternatives. I ask that the PEIS's geographic-scope assumptions explicitly account for proximity to homes, schools, and hospitals; wildland-urban interface and wildfire-prone areas; seismic hazard zones and floodplains; areas dependent on private wells; and communities with limited evacuation routes — and that proximity to existing infrastructure not be treated as a proxy for suitability.

Q3 · Impacts to analyze — The harms the study has to look at.
It's important that the study model what a battery fire's smoke does to the people living nearby. The scoping document acknowledges toxic gas from damaged batteries can hurt firefighters' skin and lungs. It does not mention neighbors, who have no protective gear and may not be able to leave. We cannot fail to consider the impact to nearby residents (and wildlife). I'll reiterate that these facilities are a disaster waiting to happen, and they should not be forced on communities (often against their will) without thorough research, risk mitigation, and consideration of alternatives. I ask that the PEIS analyze, for stand-alone facilities: thermal-runaway fires and hazardous-gas emissions (including hydrogen fluoride) with dispersion modeling for inversion-prone valleys; contaminated fire-suppression water and its path to groundwater, private wells, and fish-bearing streams; multi-day incident demands on local fire, HazMat, hospital, and evacuation capacity; continuous nighttime noise from cooling and inverters at distances beyond 1,000 feet; and seismic performance of container-based installations in mapped fault zones.

This is personal for my household. I live near a site where a stand-alone BESS facility is proposed, the Cascadia Ridge Resiliency Energy Storage facility project. My household depends on Meadowbrook Way / Boalch Ave, which is also an emergency route for everyone along it.

Because Ecology itself says stand-alone facilities "could be sited in a variety of locations," including near cities, the PEIS should not assume facilities will be far from people. I ask that Ecology treat proximity to residents as a defining condition of the analysis, and that the Draft PEIS state plainly which impacts cannot be mitigated below significance, so that lead agencies and the public are not left to guess.

Thank you for considering this comment. Please include it in the scoping record. Our community is following this PEIS closely and intends to participate in the Draft PEIS comment period.

Sincerely,
Alex Wunderlich
