

Bonnie Blessing-Earle

- 1) please consider whether any water uses needed for a BESS Would drain local streams or wetlands or wells nearby
- 2) please consider whether the BESS would save fish or wildlife that otherwise could be harmed in dams or windmills. I realize this is offsite, but could be an indirect effect
- 3) please consider the effects of lithium mining
- 4) please consider the effects of whether reversible rusting technology would be less impact than lithium mining
- 5) no one wants BESS to explode or burn but can you review technologies to put such fires out!
