

Paul Hott Sr

Why spend all the money and land resources to implement this dangerous BESS.
They say dangers can be mitigated, but no clue how.
Why don't we focus on new energy sources instead.
My property value will suffer if it's anywhere near me.

Most importantly, this a serious danger to people and my family!

In the meantime WA is forcing us to use electricity for everything, and the cost is already skyrocketing. There really is no solid evidence that burning natural gas and/or coal causes climate change. It's all scientific "theory".

We say absolutely NO to BESS.
